

Say goodnight, Rex.

You did good work, but you're history. The same goes for knives and saws, the dinosaurs of meat cutting. Like T. Rex, they're slow, dangerous and inefficient — they just can't cut it. Survival of the fittest and all that.

Introducing the very fittest — the DSI Portioner. The world's first computer-controlled waterjet meat cutter. No blades, just jets of water thinner than a human hair, moving at twice the speed of sound, and cutting 150 perfect DSI portions per minute. That's right — per *minute*.

DSI, the pioneer in intelligent waterjet cutting, created the Portioner to save you labor costs while delivering higher yield, better hygiene, and virtually any industry cut pattern. All of which could save *you* from extinction...by your competitors.

The DSI Portioner. Fast, clean and precise, 24 hours a day. Definitely not a dinosaur.

Come see the Portioner in action at the Chicago AMI Trade Show October 7-10th, 1993 (Booth 1616).

And say good night to Rex.
